Task Manager Website – Updated Functional Notes

1. Role System (Updated Logic)

The system includes three roles:

- CEO
- Manager
- Normal User

Permissions

CEO

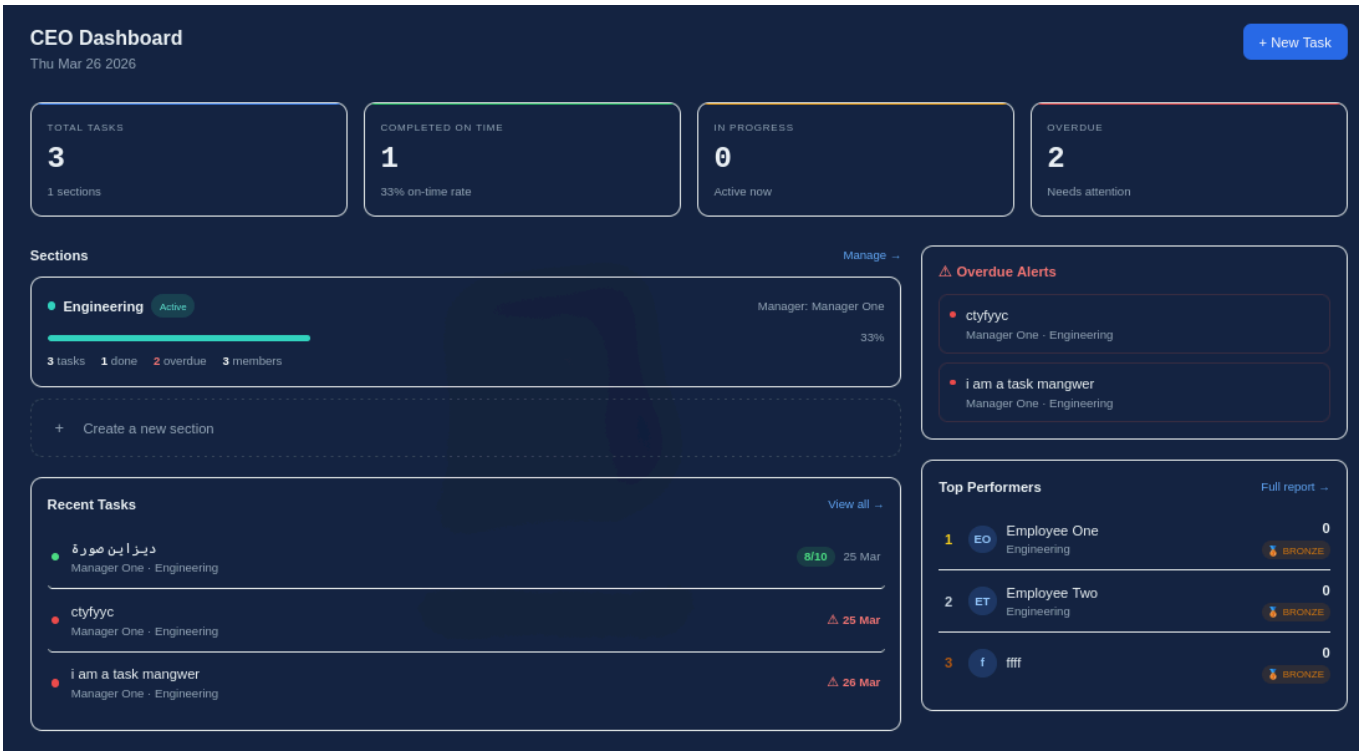
- Full administrative control
- Can assign points freely (no limits)
- Access to all performance data and analytics
- Can view system-wide activity
- Does NOT earn points

Manager

- Can create and assign tasks
- Can assign points (optionally limited)
- Can manage users within their scope

Normal User

- Can view and update assigned tasks
- Earns points based on performance
- No administrative permissions



2. User Dashboard

Each user dashboard should include:

- Pending Tasks
- Completed Tasks

Points Summary

- Points per task
- Total accumulated points

Task Timeline

- Past tasks (history)
- Active tasks
- Upcoming tasks

---

3. Dashboard Redesign

- Clean, minimal UI
- Sectioned layout:
  - Tasks overview
  - Timeline

    - Points summary
- Card-based components
- Visual indicators:
    - Colors (priority, status)
    - Icons
- Fully responsive design

---

4. Real-Time Notification System

Triggers

- New task assignment
- Task updates (status, deadline, priority)
- Points awarded

Features

- Real-time updates (WebSockets recommended)
- Notification center (bell icon)
- Read / unread states
- Timestamp for each notification

Design

- Dropdown panel with latest notifications
- Optional dedicated notifications page

- Clear icons + short messages

---

5. Task Creation (Enhanced)

Categories / Roles

- Engineer
- Programmer
- Designer

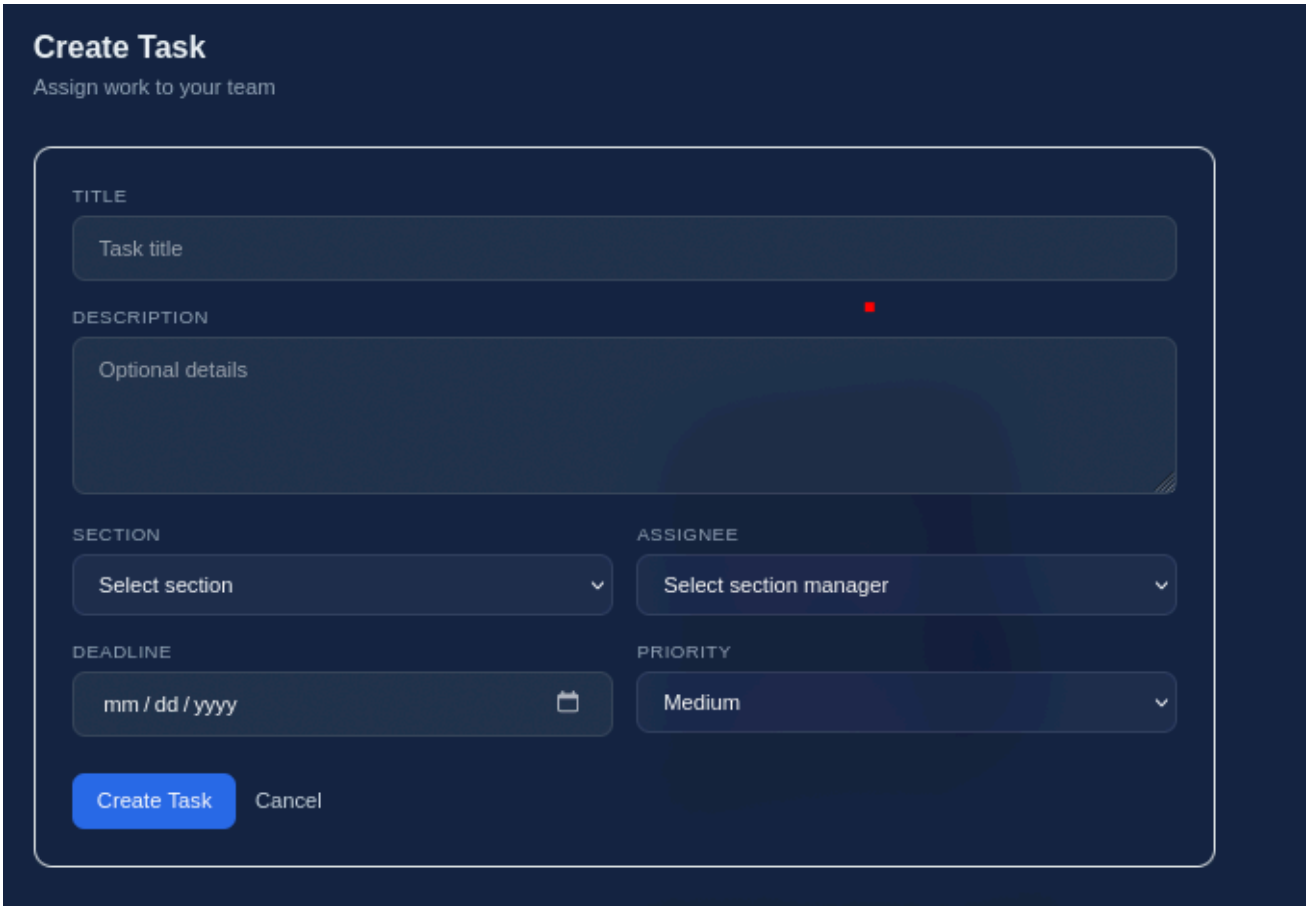
User Assignment

- Search (autocomplete)
- Dropdown selection
- Filter users by role

Attachments

- Optional file upload
- Files visible inside task

- Download support



---

6. Performance Page (New Feature)

A dedicated page to track and analyze performance.

Features

- Global leaderboard
- Ranking system:
  - Top performer
  - Second place
  - Full ranking list

Metrics

- Total points
- Completed tasks
- Efficiency (on-time vs late)

Filters

- By role (Engineer, Designer, etc.)
- By time range (weekly, monthly)

---

7. Points & Priority Logic

Points are calculated dynamically based on:

Factors

1. Task Priority

- High priority → higher base points
- Low priority → lower base points

2. Completion Time

- Finished before deadline → bonus points
- Finished on time → normal points
- Finished late → reduced or no points

Example Logic

- High priority + early completion → maximum points
- Low priority + early completion → moderate points
- High priority + late → reduced points

Summary

- CEO assigns points but does not earn them
- Performance page with ranking system
- Points depend on priority and completion time
- Real-time notifications system
- Improved dashboard UX and structure
